01 Projects where my creativity explored

in-covid Website

With pandemic cribbing all over the country, the application allows the users to see the covid affected patients in India district wise. The website also provides the growth rate along with the recovery rate for all the states. The has been sourced from various entities.

Fleet Management System

Increase in number of vehicles, made the fleet management a serious headache for many people. The market equally holds different applications to manage the same, but will not help the small business owners to manage their fleet due to thier financial constraints. This lead to this free and opensource application, which is second phase.

Request Status

Search Engine uses sitemap to crawl and index the website on their platform. Over the time the content in the sitemap may become obsolete. This project uses the python to verify whether the links present in the sitemap exist or not and exports the result to comma separated file.

Crypto2k16

With colleges overflow with Technical Symposium and Webminars, we created a Windows Mobile App for Crypto2k16. The app worked as a quick one stop solution for all the details required for the symposium hosted by Department of Computer Science and Engineering, Adhiyamaan College of Engineering, Hosur, Tamilnadu India

As Microsoft ended their support for Windows Phone, the app has been removed from Windows store and source code is available only in Github
